eloy

**robust concrete
construction to the
highest standards**

low visual impact

no odour

greastop[®], the choice of quality and simplicity

its advantages

- up to 90% of efficiency (residual oil value in mg/L)
- designed and conformed to European norm EN 1825
- low visual impact
- light vehicle traffic allowed!
- testing results available

its process

As waste water enters the grease trap, the flow rate is slowed. This allows food particles settle on the floor of the trap, while oil and grease rise and trapped on the surface.

The bigger your grease trap is, the better the flow rate will be slowed.

- from 4 L/s to 15 L/s
- high volume of sludge and grease storage
- lowest pump-out frequency on the market!

nominal flow L/s	sludge storage volume m ³	grease storage volume m ³
4	1.28	0.84
5	1.70	1.04
6	2.33	1.40
7	3.60	2.12
10	5.11	3.36
15	6.81	4.82

option

Bamo alarm unit for monitoring of grease separators in conformity with EN 1825.
