- respect for your **seasonality**
- can be installed with **groundwater** present
- 50% **shorter** installation time compared to a traditional installation

our solutions

submerged aerated fixed-film process
up to 105 m³/d

SBR
up to 600 m³/d

MBR
up to 200 m³/d

our modules

static and aerated grease traps

pump stations

sewage treatment

storage tanks

oil water separators

our services

logistics services

worksite coordination

installation assistance

hydraulic and electrical connections

commissioning

operation and maintenance

you work in a unique **sector** ...

you provide one of the **leading accommodation offer in the world**

a sector subject to specific constraints:

- a heavy seasonal pace with short windows to carry out upgrades of the facilities
- quality requirements to satisfy increasingly demanding customers
- tight budgets

... we're here to help **you** meet these challenges!

are you looking for a partner with a **solid technical knowledge who understands the local legislation** and who can provide you with a solution tailored to your specific situation?

eloy water has worked with **holidays parks for 50 years** and will provide all of its extensive expertise to your business.

our expertise, your peace of mind!

✓ simplicity & savings

A simple solution to use.
Operating, maintenance and servicing costs **reduced to a minimum.**

✓ perfect integration with the landscape

Don't worry! We guarantee very limited visual impact and zero sound or odour issues!

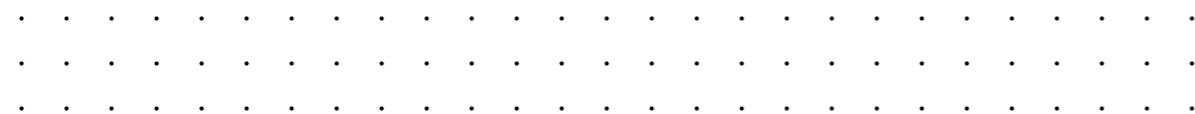

✓ specifically designed for outdoor hospitality

Our team of experts will calculate the **optimal customised installation size** based on your location, your needs and the constraints of your property.

✓ compliance with environmental and legal local standards

We guarantee **optimal discharge quality** which goes beyond current standards and local regulations.

your questions, our answers

how will you **manage the seasonality** of my business?

Wastewater solutions are not usually designed to operate under capacity or empty. In order to optimise your solution for your use, we'll calibrate its size and streamline your costs. **Thanks to the "low season" and "closed" modes,** it adjusts to your pace of business while ensuring effectiveness.

will your solutions ensure that I **comply** with legal requirements?

We work with the local public authorities, engineering and architects' firms to offer you with solutions which comply with your local legislation law. **We guarantee that we meet and go beyond discharge standards.**

how will you **protect my environment?**

In order to ensure the integrity of the landscape of your property, our tanks are usually **buried and allow for gravel paths, a lawn or plants nearby.** In addition, they're guaranteed to be odour and noise free.

will my **facilities be out of use for a long time?**

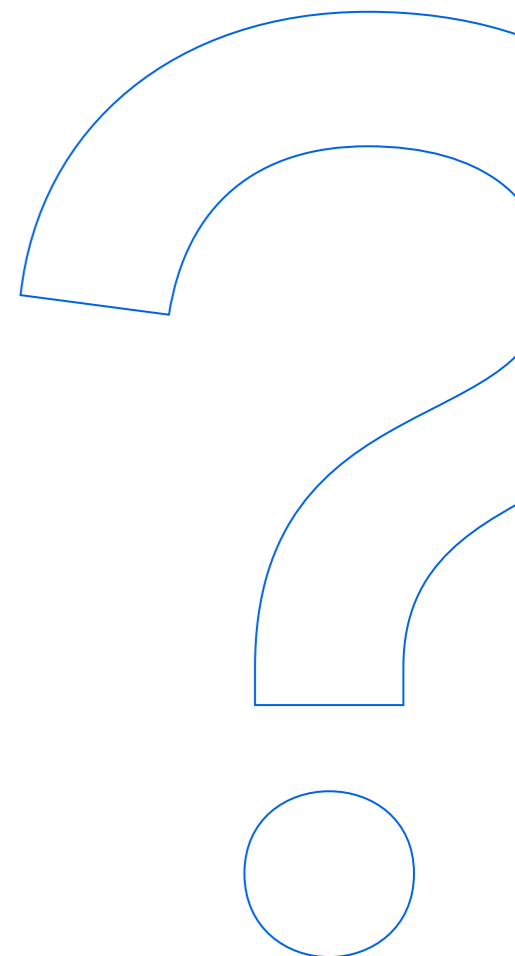

No. We study and build your solution in our factory. The time on-site includes lowering the tank in, installation and commissioning. The total time is cut in half compared to a traditional installation. The work takes two weeks on average.

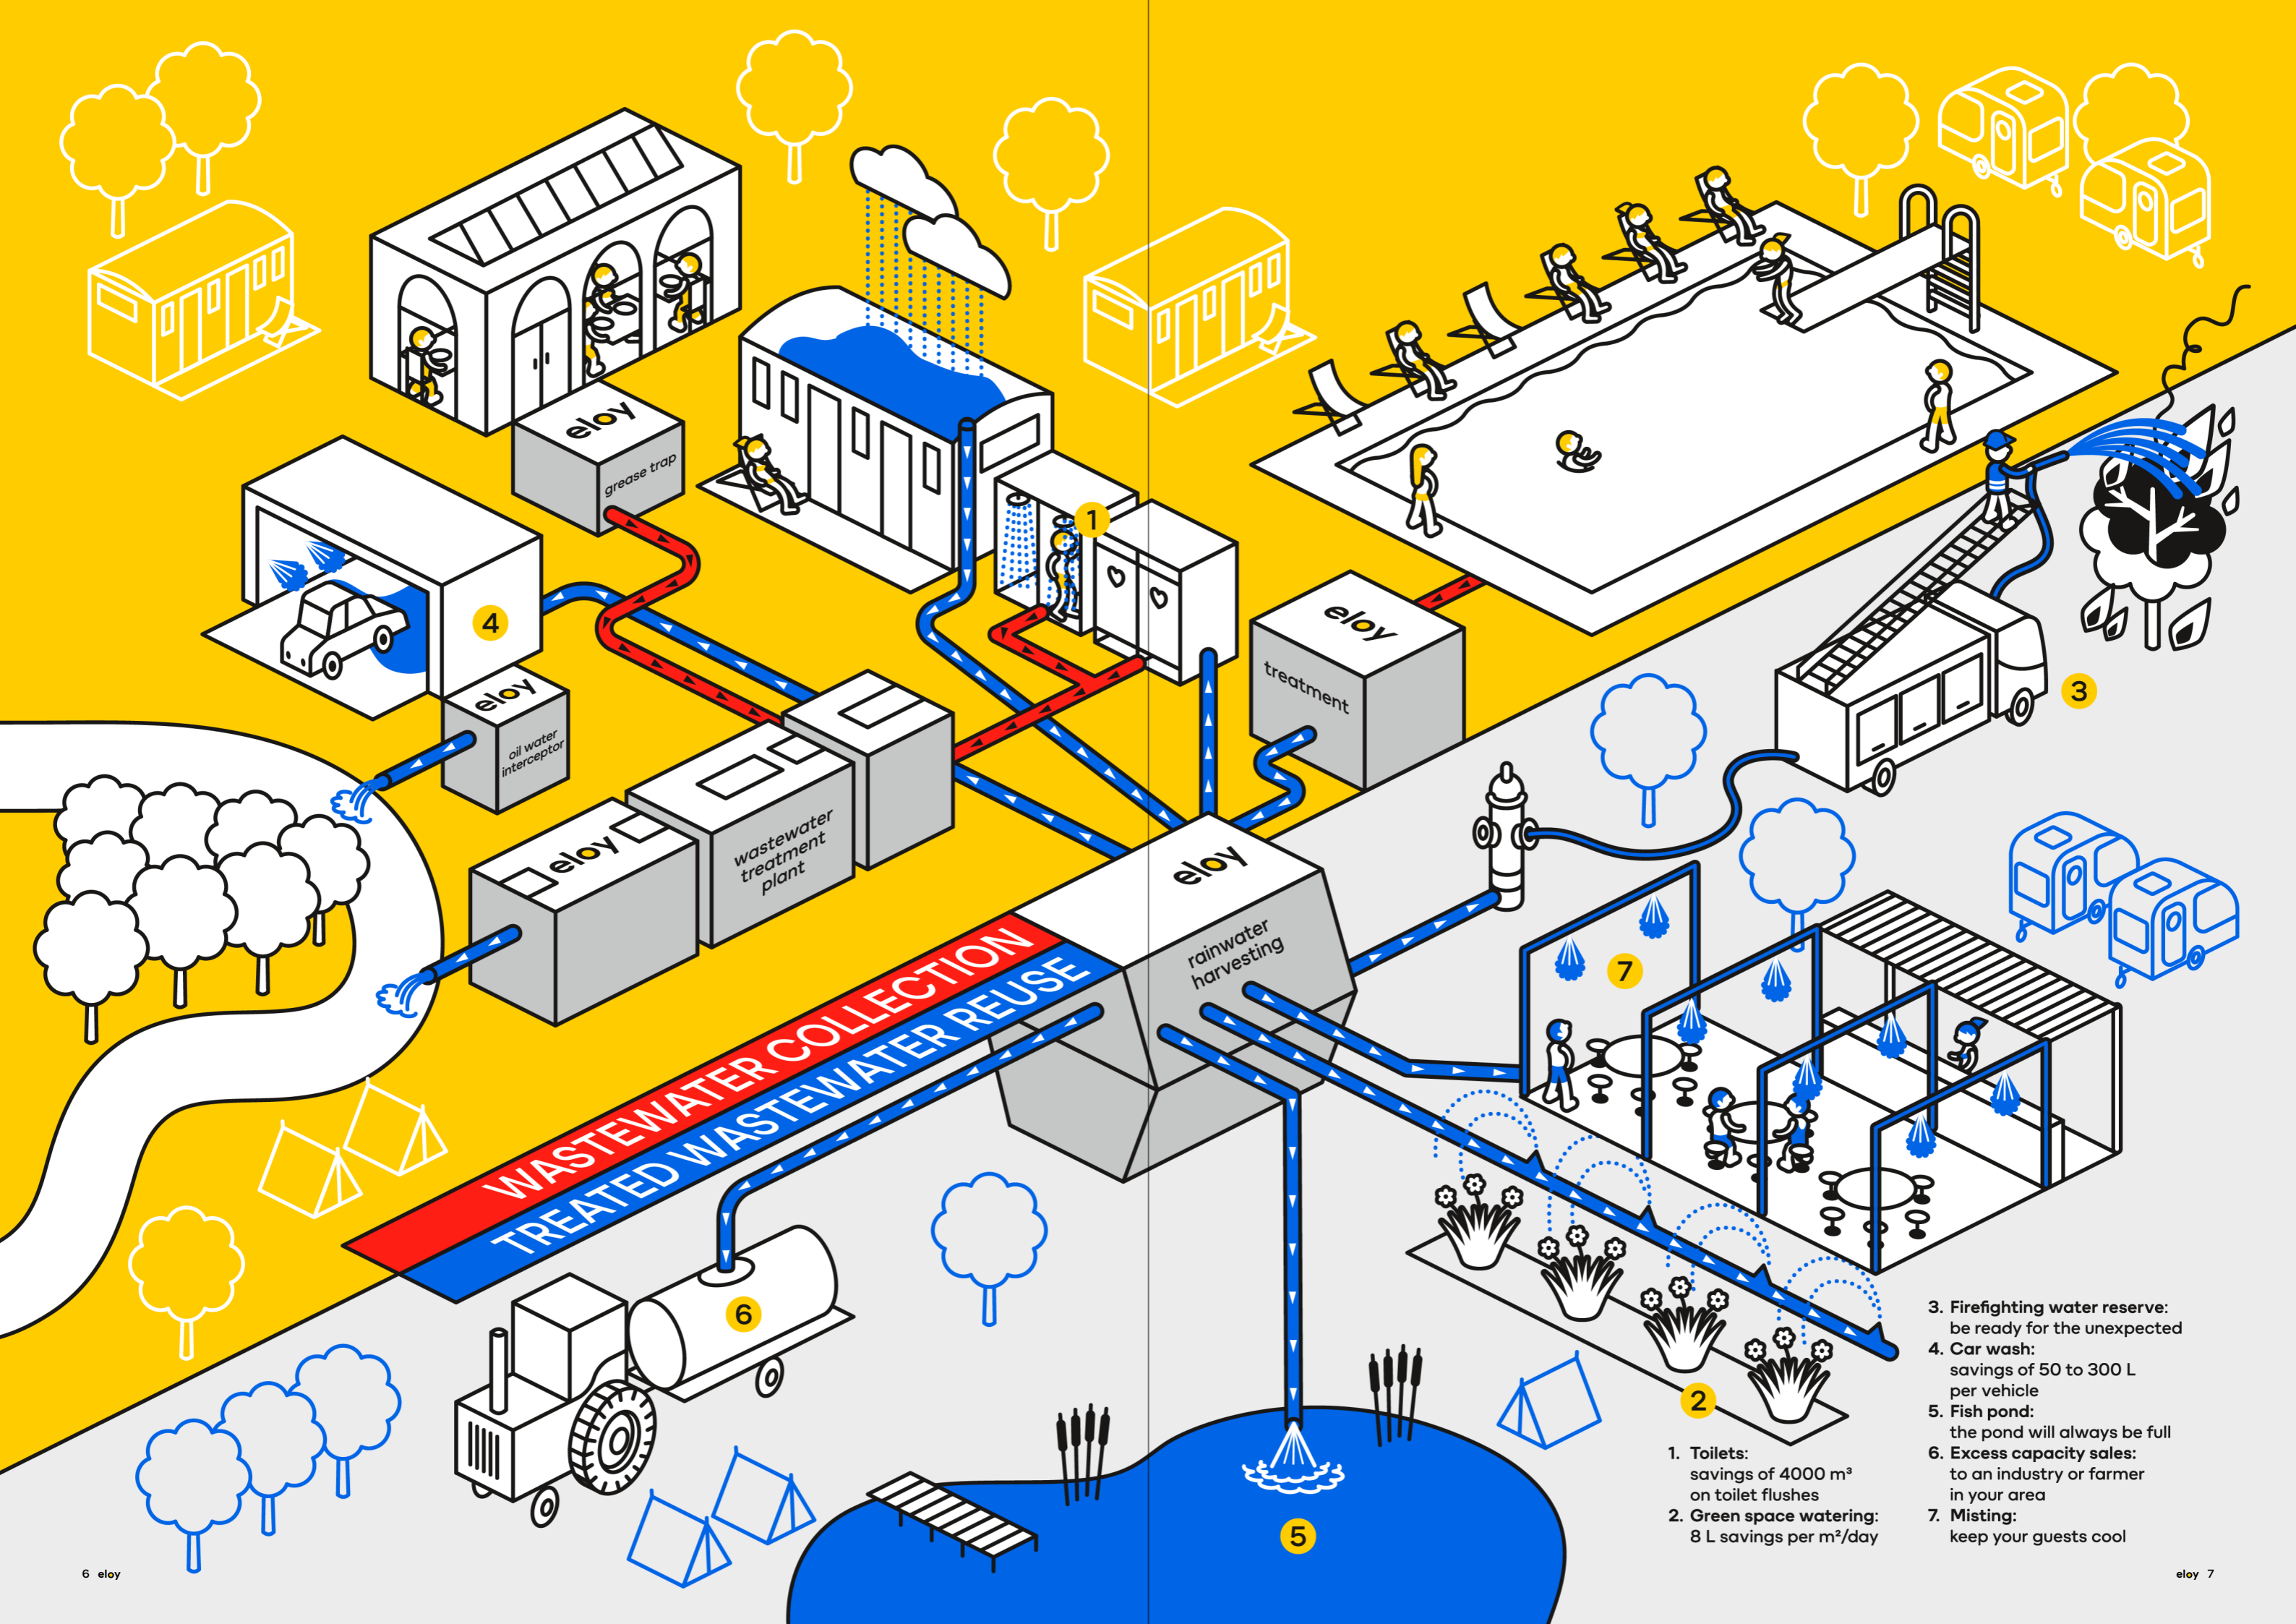

will your solutions **take up any of the rental spaces?**

No. We always design your solution based on your real needs and look for the best location possible. Our solutions are very compact and regardless if they are buried or above ground, they always have a small footprint. And, we can always install your solution under a roadway or a parking.

how will you **manage the water from my restaurant?**

We'll adapt our installation **by adding modules** that separate grease and/or hydrocarbons to ensure high quality treated water.

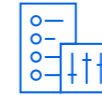

WASTEWATER COLLECTION
TREATED WASTEWATER REUSE

- 1. Toilets: savings of 4000 m³ on toilet flushes
- 2. Green space watering: 8 L savings per m²/day
- 3. Firefighting water reserve: be ready for the unexpected
- 4. Car wash: savings of 50 to 300 L per vehicle
- 5. Fish pond: the pond will always be full
- 6. Excess capacity sales: to an industry or farmer in your area
- 7. Misting: keep your guests cool

total support for your project

a well-thought-out report

We work with local authorities, engineering and architects' firms to decide on the best technology for your project based on the local legislations and the installation location.

We prepare all measurements and calculations, the plans and other technical information needed to complete your file and to obtain public subsidies for you whenever possible.

perfect sizing

We take account of your customer capacity, your seasonality and the resulting variations in loads to design your solution.

We analyse your site to find the best possible location to install the solution.

a well-managed worksite

A secure and properly-installed, effective solution requires planning.

With your approval, we'll contact your landscaper and coordinate the work with them.

This collaboration will ensure optimal tanks installations.

You can never be too careful, which is why our teams provide installation and connection assistance.

a smooth operating solution

At the end of the installation, our experts will train your teams on the operation of the solution and its use.

Given that your business is seasonal, and to ensure optimal efficiency, the operation of the solution will vary based on the pollution load entering.

In order to give you the best possible support for this process, we provide a **servicing contract that includes remote management of the installation with weekly or monthly reports (depending on the size of your installation and the organisation of maintenance operations by the technician).**

a well-maintained solution

Regular maintenance is required throughout the life cycle of your solution to ensure its effectiveness.

One of our certified servicing agent will write up a **visit report** each time they are on site.

You can count on **our network of partners and certified servicing agents** to take care of your wastewater treatment solution.
